University of Waterloo Waterloo, ON
Bachelor of Mathematics, Computing Minor (Coop) September 2021 – April 2026

Technical Skills

- Python (Flask, FastAPI)
- JavaScript / TypeScript (ReactJS, NextJS, Express, Node.js)
- Java Spring Boot
- C++/ C#/ C
- Jest / Cypress
- MySQL / SQLite / MongoDB
- Docker
- AWS
- Azure Devops

Experience

Opslevel Sep 2025 – Dec 2025
Software Developer Intern

- Developed features for the new flagship **AI Maintenance Agent**, contributing to early design decisions and iterating on functionality based on alpha customer feedback.
- Built and maintained full-stack features using **Vue.js** and **Ruby on Rails** with **GraphQL** to support core product workflows.
- Worked with **Third-party integrations** (GitHub, GitLab, Bitbucket) to support AI-driven repository maintenance and improve user onboarding workflows.
- Investigated and resolved customer-reported production issues, shipping hotfixes across frontend and backend systems

Musashi AI May 2025 – Aug 2025
Full Stack Developer Intern

- Contributed to the development of an **AI-driven visual inspection system** for vehicle components, supporting defect detection and quality assurance.
- Implemented **event-driven**, **real-time updates** using **WebSockets** and **MongoDB Change Streams**, enabling instant defect notifications and live visual feedback during inspections.
- Developed a full-stack analytics application using **Vue.js**, **TypeScript**, **Docker**, **Python** and **FastAPI** to monitor and visualize inspection results, system performance and historical accuracies.

Ontario Ministry of Education Sep 2024 – Dec 2024
Software Developer Intern

- Built an AI-assisted internal tool to accelerate analysis of **Common Vulnerabilities and Exposures** (CVE), integrating **NIST NVD** and **Llama AI** APIs to surface security information and its potential solutions.
- Designed and implemented unit tests using **C#** (**.NET Core**, **NUnit**) and E2E tests using **Selenium** to validate core workflows and improve reliability on important government websites.
- Built serverless automation using **Azure AD app registrations** and **Microsoft Graph API** to provision role-based **SharePoint Document** permissions via **OAuth2** client credentials, enabling automated onboarding and access management.

Projects

Premier League Library | Github • PyPI

- Built and published a **Python** library for analyzing transfers, team rankings, player performance, and match statistics across the top 5 European soccer leagues with **13,000+** downloads.
- Scraped and processed **17,000+** advanced match and player statistics, automatically initializing a **SQLite** database for downstream machine learning workflows upon installation.
- Developed a **Flask API** Server and an **AWS Lambda/API Gateway** application to allow users to expose the data from the library as an API.

Social Media Platform for AI Generated Images | Github • Website

- Developed a Full Stack Application to allow users to share their own Generative AI Images using **ReactJS**, **MongoDB**, **ExpressJS**, and **TypeScript**.
- Utilized **Docker** and **GitHub Actions** to create multi-staged **CI/CD pipelines** for deployments and efficient testing in production environments.
- Integrated **OpenAI API** with strict rate limits to allow users to generate images on the platform.
